SNOW SURVEY AND SOIL MOISTURE MEASUREMENTS

1974 BASIC DATA SUMMARY FOR

WESTERN UNITED STATES

Including Columbia River Drainage in Canada

U. S. DEPARTMENT of AGRICULTURE ★ SOIL CONSERVATION SERVICE

Collaborating with
CALIFORNIA DEPARTMENT of WATER RESOURCES
and
BRITISH COLUMBIA DEPARTMENT of
LANDS, FORESTS and WATER RESOURCES

AS OF
OCT. 1, 1974

TO RECIPIENTS OF WATER SUPPLY OUTLOOK REPORTS:

Most of the usable water in western states originates as mountain snowfall. This snowfall accumulates during the winter and spring, several months before the snow melts and appears as streamflow. Since the runoff from precipitation as snow is delayed, estimates of snowmelt runoff can be made well in advance of its occurrence. Streamflow forecasts published in this report are based principally on measurement of the water equivalent of the mountain snowpack.

Forecasts become more accurate as more of the data affecting runoff are measured. All forecasts assume that climatic factors during the remainder of the snow accumulation and melt season will interact with a resultant average effect on runoff. Early season forecasts are therefore subject to a greater change than those made on later dates.

The snow course measurement is obtained by sampling snow depth and water equivalent at surveyed and marked locations in mountain areas. A total of about ten samples are taken at each location. The average of these are reported as snow depth and water equivalent. These measurements are repeated in the same location near the same dates each year.

Snow surveys are made monthly or semi-monthly from January 1 through June 1 in most states. There are about 1900 snow courses in Western United States and in the Columbia Basin in British Columbia. Networks of automatic snow water equivalent and related data sensing devices, along with radio telemetry are expanding and will provide a continuous record of snow water and other parameters at key locations.

Detailed data on snow course and soil moisture measurements are presented in state and local reports. Other data on reservoir storage, summaries of precipitation, current streamflow, and soil moisture conditions at valley elevations are also included. The report for Western United States presents a broad picture of water supply outlook conditions, including selected streamflow forecasts, summary of snow accumulation to date, and storage in larger reservoirs.

Snow survey and soil moisture data for the period of record are published by the Soil Conservation Service by states about every five years. Data for the current year is summarized in a West-wide basic data summary and published about October 1 of each year.

PUBLISHED BY SOIL CONSERVATION SERVICE

The Soil Conservation Service publishes reports following the principal snow survey dates from January 1 through June 1 in cooperation with state water administrators, agricultural experiment stations and others. Copies of the reports for Western United States and all state reports may be obtained from Soil Conservation Service, Western Regional Technical Service Center, Room 209, 511 N. W. Broadway, Portland, Oregon 97209.

Copies of state and local reports may also be obtained from state offices of the Soil Conservation Service in the following states:

STATE	ADDRESS
Alaska	204 E. 5th. Ave., Room 217, Anchorage, Alaska 99501
Arizona	6029 Federal Building, Phoenix, Arizona 85025
Colorado (N. Mex.)	P. O. Box 17107, Denver, Colorado 80217
Idaho	Room 345, 304 N. 8th. St., Boise, Idaho 83702
Montana	P. O. Box 98, Bozeman, Montana 59715
Nevada	P. O. Box 4850, Reno Nevada 89505
Oregon	1218 S. W. Washington St., Portland, Oregon 97205
Utah	4012 Federal Bldg., 125 South State St., Salt Lake City, Utah 84138
Washington	360 U.S. Court House, Spokane, Washington 99201
Wyoming	P. O. Box 2440, Casper, Wyoming 82601

PUBLISHED BY OTHER AGENCIES

Water Supply Outlook reports prepared by other agencies include a report for California by the Water Supply Forecast and Snow Surveys Unit, California Department of Water Resources, P. O. Box 388, Sacramento, California 95802 --- and for British Columbia by the Department of Lands, Forests and Water Resources, Water Resources Service, Parliament Building, Victoria, British Columbia

FEDERAL - STATE - PRIVATE COOPERATIVE SNOW SURVEYS
BASIC DATA SUMMARY
of
SNOW SURVEY AND SOIL MOISTURE MEASUREMENTS
for
WESTERN UNITED STATES
Including Columbia River Drainage in Canada
1973 - 1974 SEASON

OCTOBER 1974

The Soil Conservation Service coordinates snow surveys conducted by its staff and many cooperators, including the Bureau of Reclamation, Corps of Engineers, Forest Service, National Park Service, Weather Bureau, Geological Survey, and other Federal Agencies, Departments of State Government, Irrigation Districts, Power Companies, and others.

The Department of Water Resources coordinates snow surveys in California.

The Water Resources Service, Department of Lands, Forests, and Water Resources directs snow surveys in British Columbia.

This report was prepared by the Water Supply Forecasting Branch, Engineering Division, Soil Conservation Service, from data supplied by Snow Survey Supervisors of the Soil Conservation Service in the States of Alaska, Arizona, Colorado and New Mexico, Idaho, Montana, Nevada, Oregon, Utah, Washington, and Wyoming.

Data from California was supplied by the Chief, Water Supply Forecast and Snow Survey Unit, Department of Water Resources.

Data from British Columbia was supplied by the Chief, Hydrology Division, Water Investigations Branch, Department of Lands, Forests and Water Resources.

PREFACE

This summary of basic data gathered by Federal-State Cooperative Snow Surveys includes all snow survey and soil moisture measurements made during the 1974 season. All measurements in the western United States and the Columbia River Basin in British Columbia are listed. Snow Survey data for other areas in British Columbia may be obtained from the Water Resources Service, Department of Lands, Forests, and Water Resources, Parliament Buildings, Victoria, British Columbia. Additional California data are available from the Department of Water Resources, Water Supply Forecast and Snow Surveys Unit, P. O. Box 388, Sacramento, California 95802.

This publication is the twelfth of an annual series summarizing basic snow survey and soil moisture data. Records of past measurements are available in summary form for the states of Alaska, Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. These may be requested from Water Supply Forecasting Unit, Soil Conservation Service, Room 209, 511 N.W. Broadway, Portland, Oregon 97209. British Columbia and California summaries may be secured from the agencies listed above.

EXPLANATION OF TABLES

Except for California data, snow course measurements are listed alphabetically by principal watersheds under the major river basins: Missouri, Arkansas, Rio Grande, Colorado, Great, Upper Columbia, Lower Columbia, Snake, Pacific Coastal, and Alaska.

On the snow course identification line following the name of the snow course, the first number indicates a code number for the state in which it is located:

<u>State</u>	<u>Code</u>	<u>State</u>	<u>Code</u>
Arizona	1	Utah	9
California	2	Washington	10
Colorado	3	Wyoming	11
Idaho	4	South Dakota	12
Montana	5	British Columbia	13
Nevada	6	Alaska	14
New Mexico	7	Alberta	15
Oregon	8	Saskatchewan	16

The next group of five numbers and letters is the code number for the snow course and (or) soil moisture station. The first two numbers show that the installation is between longitude line of one hundred plus this number and the next higher number. The next letter represents parallels of latitude. These letter designations start in the first cell tier south of the Canadian border and running south are A, B, C,...Z, omitting I, O, and Q. The next two numbers are the number of the installation within the described rectangle. The "M" following the series indicates a soil moisture station; an "A" indicates an air marker located on the course, and a "2" indicates an air marker not on a snow course.

The final numbers are elevation of the snow course or soil moisture station.

Data on the next line are measurements taken near the first of the months of January through June. Data on subsequent lines are mid-month or early season measurements and may not fit the major column headings.

The data lines show the month and day of measurement, snow depth in inches, and the snow water equivalent in inches and tenths of inches.

Soil moisture stations are listed in a similar manner to snow courses. The identification line for soil moisture stations is the same as for snow courses. The data lines show the date of measurement and the total soil moisture for the profile depth measured in inches and tenths of inches.

California data are published in this report through the cooperation of the California Department of Water Resources. California also publishes these and additional data in their annual fall report issued in October of each year.

The California data in this report are listed in two major subsections: snow course measurements and aerial marker measurements. Each subsection is divided into major hydrographic areas. Within each area the data is further subdivided into stream basins. Snow courses or aerial markers within each basin are listed in a descending elevational order.

The first number following a station name is the California identification number. The second number is the elevation. If the snow course identification number is followed by an asterisk, this indicates an aerial marker is located on or near the snow course with the same name and number. If the identification number for an aerial marker is less than 500, it is followed by an asterisk to indicate that it is located within 1000 feet of a snow course with the same name and number.

Measurement data is listed in the same manner as previously described above. California reports their snow depth data to the nearest tenth of an inch. In this report the data has been truncated in computer processing to a whole inch. Thus, a snow depth value of 87.2 or 87.9 is listed as 87.

Some of the California data is repeated in the Pacific Coastal Basin and Great Basin sections of the report. This is because the data is published in both SCS and California reports.
